Instituto Politécnico Nacional

El manejo ineficiente del recurso hídrico, especialmente en el cuidado de jardines domésticos, representa un desafío creciente en la optimización del consumo de agua y la reducción de costos asociados. Los métodos de riego tradicionales a menudo carecen de la adaptabilidad necesaria para responder a las condiciones ambientales en tiempo real, limitando la eficiencia y el ahorro. Ante esta problemática, presentamos el diseño e implementación de un asistente inteligente de riego en tiempo real, que integra un sistema embebido con algoritmos de machine learning. Este sistema, desarrollado para un domicilio específico en Ecatepec de Morelos durante el periodo de febrero a junio de 2025, busca optimizar el consumo de agua en jardines domésticos. Mediante la aplicación de aprendizaje automático, nuestro asistente es capaz de tomar decisiones de riego adaptativas, lo que contribuye directamente a la reducción de los costos hídricos. Los resultados resaltan el potencial de los sistemas inteligentes embebidos para abordar la complejidad del riego eficiente, proporcionando un marco adaptable para la gestión sostenible del agua en entornos residenciales.

Articulo

En la actualidad, el mundo enfrenta una problemática crítica que sigue en constante crecimiento, la urgencia de optimizar el uso de los recursos hídricos, especialmente en entornos urbanos de rápido crecimiento como lo son las ciudades, aunque apenas ocupan el 3% de la superficie terrestre, ejercen una presión considerable sobre los sistemas hídricos, haciendo que la gestión del agua sea una preocupación primordial [1]. En México, esta situación es particularmente apremiante, el director Vega López señala que específicamente en el Valle de México, existen restricciones en la oferta de agua que amenazan la seguridad hídrica de la Región Hidrológico-Administrativa XIII (RHA XIII), comprometiendo gravemente la sustentabilidad [2]. Dentro de este contexto, una práctica cotidiana dentro de estos lugares es el riego de jardines domésticos, que si no se realiza bajo criterios ambientales adecuados, implica un alto consumo de agua.

Diversos estudios han propuesto soluciones para la gestión del agua, incluyendo la modernización de infraestructuras, la consideración de factores socioambientales y enfoques basados en la naturaleza. En el ámbito tecnológico, se han propuesto sistemas de riego inteligente basados en el Internet de las Cosas (IoT) y la Inteligencia Artificial (IA), demostrando su potencial para reducir el consumo de agua entre un 30 % y un 50 % en comparación con métodos tradicionales [3]. Sin embargo, muchas de estas propuestas presentan limitaciones para contextos domésticos debido a su alto costo, complejidad o

dependencia de infraestructura especializada. Esto genera una brecha en la disponibilidad de soluciones accesibles y eficientes para el ahorro de agua en jardines residenciales.

Este estudio aborda la problemática específica del alto consumo de agua en el cuidado de jardines domésticos, ejemplificado en el domicilio lote 30, manzana 5, Calle Cerro de la Silla, colonia Sagitario 1, Ecatepec de Morelos, donde se ha contabilizado un promedio de 240 L/mes para un jardín de 49 m². Esta vivienda es considerada como una unidad doméstica, media y de uso medido, por lo que el costo de consumo de agua, considerando solo al jardín, se estima en \$ 107.9829/mes y \$ 1,295.7948/año[4].

Con el objetivo de resolver esta situación, el trabajo se centra en el diseño e implementación de un asistente inteligente de riego en tiempo real, buscando reducir los costos relacionados con el consumo de agua en este jardín doméstico. El enfoque metodológico adoptado es de tipo mixto, combinando métodos cuantitativos para evaluar el impacto técnico del sistema y cualitativos para analizar la percepción y aceptación de los usuarios.

Los resultados obtenidos durante las pruebas iniciales han demostrado una reducción del consumo estimado de agua del 47.69%, disminuyendo de un consumo de 78 litros a 40.8 litros. Estos hallazgos no solo evidencian la viabilidad técnica y económica de la propuesta, sino que también promueven un uso más eficiente y sostenible del agua en entornos residenciales.

3. Equations

Equations in LaTeX can either be inline or on-a-line by itself ("display equations"). For inline equations use the \dots commands. E.g.: The equation $H\psi = E\psi$ is written via the command $H \le E\psi$ is written via the command $H \le E\psi$.

For display equations (with auto generated equation numbers) one can use the equation or align environments:

$$\|\tilde{X}(k)\|^{2} \leq \frac{\sum_{i=1}^{p} \|\tilde{Y}_{i}(k)\|^{2} + \sum_{j=1}^{q} \|\tilde{Z}_{j}(k)\|^{2}}{p+q}.$$
 (1)

where,

$$D_{\mu} = \partial_{\mu} - ig \frac{\lambda^{a}}{2} A^{a}_{\mu}$$

$$F^{a}_{\mu\nu} = \partial_{\mu} A^{a}_{\nu} - \partial_{\nu} A^{a}_{\mu} + g f^{abc} A^{b}_{\mu} A^{a}_{\nu}$$

$$(2)$$

Notice the use of \nonumber in the align environment at the end of each line, except the last, so as not to produce equation numbers on lines where no equation numbers are required. The \label{} command should only be used at the last line of an align environment where \nonumber is not used.

$$Y_{\infty} = \left(\frac{m}{\text{GeV}}\right)^{-3} \left[1 + \frac{3\ln(m/\text{GeV})}{15} + \frac{\ln(c_2/5)}{15}\right]$$
 (3)

The class file also supports the use of \mathbf{R} , \mathbf{R} and \mathbf{R} produces \mathbf{R} , and \mathbf{R} respectively (refer Subsubsection 2.1.1).

4. Tables

Tables can be inserted via the normal table and tabular environment. To put footnotes inside tables you should use \footnotetext[]{...} tag. The footnote appears just below the table itself (refer Tables 1 and 2). For the corresponding footnotemark use \footnotemark[...]

Cuadro 1 Caption text

Column 1	Column 2	Column 3	Column 4
row 1	data 1	data 2	data 3
row 2	data 4	data 5 ¹	data 6
row 3	data 7	data 8	data 9 ²

Source: This is an example of table footnote. This is an example of table footnote.

The input format for the above table is as follows:

```
\begin{table}[<placement-specifier>]
\caption{<table-caption>}\label{<table-label>}%
\begin{tabular}{0{}11110{}}
\toprule
Column 1 & Column 2 & Column 3 & Column 4\\
\midrule
row 1 & data 1 & data 2 & data 3 \\
row 2 & data 4 & data 5\footnotemark[1] & data 6 \\
row 3 & data 7 & data 8 & data 9\footnotemark[2]\\
\botrule
\end{tabular}
\footnotetext{Source: This is an example of table footnote.
This is an example of table footnote.}
\footnotetext[1]{Example for a first table footnote.
This is an example of table footnote.}
\footnotetext[2]{Example for a second table footnote.
This is an example of table footnote.}
\end{table}
```

In case of double column layout, tables which do not fit in single column width should be set to full text width. For this, you need to use \begin{table*} ... \end{table*} instead of \begin{table} ... \end{table} environment. Lengthy tables which do not fit in textwidth should be set as rotated table. For this, you need to use \begin{sidewaystable} ... \end{sidewaystable} instead of \begin{table*} ... \end{table*} environment. This environment puts tables rotated to single column width. For tables rotated to double column width, use \begin{sidewaystable*} ... \end{sidewaystable*}... \end{sidewaystable*}.

¹Example for a first table footnote. This is an example of table footnote.

 $^{^2}$ Example for a second table footnote. This is an example of table footnote.

Cuadro 2 Example of a lengthy table which is set to full textwidth

		Element 1	1		Element 2	2^2
Project	Energy	σ_{calc}	σ_{expt}	Energy	σ_{calc}	σ_{expt}
Element 3 Element 4	990 A 500 A	1168 961	1547 ± 12 922 ± 10	780 A 900 A	1166 1268	1239 ± 100 1092 ± 40

Note: This is an example of table footnote. This is an example of table footnote this is an example of table footnote this is an example of table footnote.

5. Figures

As per the LATEX standards you need to use eps images for LATEX compilation and pdf/jpg/png images for PDFLaTeX compilation. This is one of the major difference between LATEX and PDFLaTeX. Each image should be from a single input .eps/vector image file. Avoid using subfigures. The command for inserting images for LATEX and PDFLaTeX can be generalized. The package used to insert images in LaTeX/PDFLaTeX is the graphicx package. Figures can be inserted via the normal figure environment as shown in the below example:

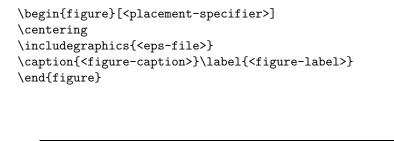

Figura 1 This is a widefig. This is an example of long caption this is an example of long caption this is an example of long caption

In case of double column layout, the above format puts figure captions/images to single column width. To get spanned images, we need to provide \begin{figure*} . . . \end{figure*}.

For sample purpose, we have included the width of images in the optional argument of \includegraphics tag. Please ignore this.

¹Example for a first table footnote.

 $^{^2}$ Example for a second table footnote.

Cuadro 3 Tables which are too long to fit, should be written using the "sidewaystable" environment as shown here

		Element 1^1			${ m Element}^2$	
Projectile	Energy	σ_{calc}	σ_{expt}	Energy	σ_{calc}	σ_{expt}
Element 3	990 A	1168	1547 ± 12	780 A	1166	1239 ± 100
	500 A	961	922 ± 10	900 A	1268	1092 ± 40
Element 5	990 A	1168	1547 ± 12	780 A	1166	1239 ± 100
	500 A	961	922 ± 10	900 A	1268	1092 ± 40

Note: This is an example of table footnote this is an example of table footnote this is an example of table footnote this is an example of table footnote.

 $^{^1\}mathrm{This}$ is an example of table footnote.

6. Algorithms, Program codes and Listings

Packages algorithm, algorithmicx and algorithms in LATEX using the format:

```
\begin{algorithm}
\caption{<alg-caption>}\label{<alg-label>}
\begin{algorithmic}[1]
. . .
\end{algorithmic}
\end{algorithm}
```

You may refer above listed package documentations for more details before setting algorithm environment. For program codes, the "verbatim" package is required and the command to be used is \begin{verbatim} ... \end{verbatim}.

Similarly, for listings, use the listings package. \begin{lstlisting} ... \end{lstlisting} is used to set environments similar to verbatim environment. Refer to the lstlisting package documentation for more details.

A fast exponentiation procedure:

```
begin
  for i := 1 to 10 step 1 do
       expt(2,i);
       newline() od
                                         Comments will be set flush to the right margin
where
proc expt(x,n) \equiv
  z := 1;
  do if n=0 then exit fi;
     do if odd(n) then exit fi;
         comment: This is a comment statement;
         n := n/2; x := x * x \text{ od};
      \{ n > 0 \};
     n:=n-1; z:=z*x od;
  print(z).
end
```

```
for i:=maxint to 0 do
begin
{ do nothing }
end;
Write('Case-insensitive-');
Write('Pascal-keywords.');
```

Algorithm 1 Calculate $y = x^n$

```
Require: n \ge 0 \lor x \ne 0
Ensure: y = x^n
 1: y \Leftarrow 1
 2: if n < 0 then
          X \Leftarrow 1/x
          N \Leftarrow -n
 5: else
          X \Leftarrow x
 6:
          N \Leftarrow n
 7:
     end if
 8:
     while N \neq 0 do
 9:
          if N is even then
10:
              X \Leftarrow X \times X
11:
               N \Leftarrow N/2
12:
          else[N \text{ is odd}]
13:
              y \Leftarrow y \times X
14:
               N \Leftarrow N - 1
15:
          end if
16:
17: end while
```

7. Cross referencing

Environments such as figure, table, equation and align can have a label declared via the \label{#label} command. For figures and table environments use the \label{} command inside or just below the \caption{} command. You can then use the \ref{#label} command to cross-reference them. As an example, consider the label declared for Figure 1 which is \label{fig1}. To cross-reference it, use the command Figure \ref{fig1}, for which it comes up as "Figure 1".

To reference line numbers in an algorithm, consider the label declared for the line number 2 of Algorithm 1 is \label{algln2}. To cross-reference it, use the command \ref{algln2} for which it comes up as line 2 of Algorithm 1.

7.1. Details on reference citations

Standard LATEX permits only numerical citations. To support both numerical and author-year citations this template uses natbib LATEX package. For style guidance please refer to the template user manual.

Here is an example for \cite{...}: [?]. Another example for \citep{...}: [?]. For author-year citation mode, \cite{...} prints Jones et al. (1990) and \citep{...} prints (Jones et al., 1990).

8. Examples for theorem like environments

For theorem like environments, we require amsthm package. There are three types of predefined theorem styles exists—thmstyleone, thmstyletwo and thmstylethree

thmstyleone	Numbered, theorem head in bold font and theorem
	text in italic style
thmstyletwo	Numbered, theorem head in roman font and theorem
	text in italic style
thmstylethree	Numbered, theorem head in bold font and theorem
	text in roman style

For mathematics journals, theorem styles can be included as shown in the following examples:

Theorem 1 (Theorem subhead) Example theorem text. Example theorem text.

Sample body text. Sample body text. Sample body text. Sample body text. Sample body text. Sample body text.

Proposition 2 Example proposition text. Example proposition text.

Sample body text. Sample body text. Sample body text. Sample body text. Sample body text. Sample body text.

Example 1 Phasellus adipiscing semper elit. Proin fermentum massa ac quam. Sed diam turpis, molestie vitae, placerat a, molestie nec, leo. Maecenas lacinia. Nam ipsum ligula, eleifend at, accumsan nec, suscipit a, ipsum. Morbi blandit ligula feugiat magna. Nunc eleifend consequat lorem.

Sample body text. Sample body text.

Remark 1 Phasellus adipiscing semper elit. Proin fermentum massa ac quam. Sed diam turpis, molestie vitae, placerat a, molestie nec, leo. Maecenas lacinia. Nam ipsum ligula, eleifend at, accumsan nec, suscipit a, ipsum. Morbi blandit ligula feugiat magna. Nunc eleifend consequat lorem.

Sample body text. Sample body text.

Definition 1 (Definition sub head) Example definition text. Example definition text.

Additionally a predefined "proof" environment is available: \begin{proof} ... \end{proof}. This prints a "Proof" head in italic font style and the "body text" in roman font style with an open square at the end of each proof environment.

Demostraci'on Example for proof text. \Box

9. Methods

Topical subheadings are allowed. Authors must ensure that their Methods section includes adequate experimental and characterization data necessary for others in the field to reproduce their work. Authors are encouraged to include RIIDs where appropriate.

Ethical approval declarations (only required where applicable) Any article reporting experiment/s carried out on (i) live vertebrate (or higher invertebrates), (ii) humans or (iii) human samples must include an unambiguous statement within the methods section that meets the following requirements:

- 1. Approval: a statement which confirms that all experimental protocols were approved by a named institutional and/or licensing committee. Please identify the approving body in the methods section
- 2. Accordance: a statement explicitly saying that the methods were carried out in accordance with the relevant guidelines and regulations

3. Informed consent (for experiments involving humans or human tissue samples): include a statement confirming that informed consent was obtained from all participants and/or their legal guardian/s

If your manuscript includes potentially identifying patient/participant information, or if it describes human transplantation research, or if it reports results of a clinical trial then additional information will be required. Please visit (https://www.nature.com/nature-research/editorial-policies) for Nature Portfolio journals, (https://www.springer.com/gp/authors-editors/journal-author/journal-author-helpdesk/publishing-ethics/14214) for Springer Nature journals, or (https://www.biomedcentral.com/getpublished/editorial-policies#ethics+and+consent) for BMC.

10. Discussion

Discussions should be brief and focused. In some disciplines use of Discussion or 'Conclusion' is interchangeable. It is not mandatory to use both. Some journals prefer a section 'Results and Discussion' followed by a section 'Conclusion'. Please refer to Journal-level guidance for any specific requirements.

11. Conclusion

Conclusions may be used to restate your hypothesis or research question, restate your major findings, explain the relevance and the added value of your work, highlight any limitations of your study, describe future directions for research and recommendations.

In some disciplines use of Discussion or 'Conclusion' is interchangeable. It is not mandatory to use both. Please refer to Journal-level guidance for any specific requirements.

Supplementary information. If your article has accompanying supplementary file/s please state so here.

Authors reporting data from electrophoretic gels and blots should supply the full unprocessed scans for key as part of their Supplementary information. This may be requested by the editorial team/s if it is missing.

Please refer to Journal-level guidance for any specific requirements.

Acknowledgements. Acknowledgements are not compulsory. Where included they should be brief. Grant or contribution numbers may be acknowledged.

Please refer to Journal-level guidance for any specific requirements.

Declarations

Some journals require declarations to be submitted in a standardised format. Please check the Instructions for Authors of the journal to which you are submitting to see if you need to complete this section. If yes, your manuscript must contain the following sections under the heading 'Declarations':

- Funding
- Conflict of interest/Competing interests (check journal-specific guidelines for which heading to use)
- Ethics approval and consent to participate
- Consent for publication
- Data availability
- Materials availability
- Code availability
- Author contribution

If any of the sections are not relevant to your manuscript, please include the heading and write 'Not applicable' for that section.
